

# Syllabus and Course Schedule

**Time and Location:** Monday, Wednesday 4:30-5:50pm, [Bishop Auditorium](#)

**Class Videos:** Current quarter's class videos are available [here](#) for SCPD students and [here](#) for non-SCPD students.

| Event     | Date  | Description                                                                                | Materials and Assignments                                                                                                    |
|-----------|-------|--------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| Lecture 1 | 9/24  | Introduction and Basic Concepts                                                            |                                                                                                                              |
| A0        | 9/24  | <b>Problem Set 0</b> [pdf]. Out 9/24. Due 10/3. <a href="#">Submission instructions</a> .  |                                                                                                                              |
| Lecture 2 | 9/26  | Supervised Learning Setup. Linear Regression.                                              | <b>Class Notes</b> <ul style="list-style-type: none"><li>Supervised Learning, Discriminative Algorithms [ps] [pdf]</li></ul> |
| Section   | 9/28  | <b>Discussion Section:</b> Linear Algebra [Notes]                                          |                                                                                                                              |
| Lecture 3 | 10/1  | Weighted Least Squares. Logistic Regression. Netwon's Method                               | <b>Class Notes</b> <ul style="list-style-type: none"><li>Generative Algorithms [ps] [pdf]</li></ul>                          |
| Lecture 4 | 10/3  | Perceptron. Exponential Family. Generalized Linear Models.                                 |                                                                                                                              |
| A1        | 10/3  | <b>Problem Set 1</b> [zip]. Out 10/3. Due 10/17. <a href="#">Submission instructions</a> . |                                                                                                                              |
| Section   | 10/5  | <b>Discussion Section:</b> Probability[Notes][Slides]                                      |                                                                                                                              |
| Lecture 5 | 10/8  | Gaussian Discriminant Analysis. Naive Bayes.                                               |                                                                                                                              |
| Lecture 6 | 10/10 | Laplace Smoothing. Support Vector Machines.                                                | <b>Class Notes</b> <ul style="list-style-type: none"><li>Support Vector Machines [ps] [pdf]</li></ul>                        |

| Event      | Date  | Description                                                                                                  | Materials and Assignments                                                                                                                                                                                                                                                                          |
|------------|-------|--------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Section    | 10/12 | <b>Discussion Section:</b> Python <a href="#">[slides]</a>                                                   |                                                                                                                                                                                                                                                                                                    |
| Lecture 7  | 10/15 | Support Vector Machines. Kernels.                                                                            |                                                                                                                                                                                                                                                                                                    |
| Lecture 8  | 10/17 | Bias-Variance tradeoff. Regularization and model/feature selection.                                          | <b>Class Notes</b> <ul style="list-style-type: none"> <li>• Bias/variance tradeoff and error analysis<a href="#">[pdf]</a></li> <li>• Regularization and Model Selection <a href="#">[ps]</a> <a href="#">[pdf]</a></li> <li>• Advice on applying machine learning<a href="#">[pdf]</a></li> </ul> |
| A2         | 10/17 | <b>Problem Set 2</b> <a href="#">[zip]</a> . Out 10/17. Due 10/31. <a href="#">Submission instructions</a> . |                                                                                                                                                                                                                                                                                                    |
| Section    | 10/19 | <b>Discussion Section:</b> Learning Theory <a href="#">[ps]</a> <a href="#">[pdf]</a>                        |                                                                                                                                                                                                                                                                                                    |
| Project    | 10/19 | Project proposal due at <b>11:59pm</b> .                                                                     |                                                                                                                                                                                                                                                                                                    |
| Lecture 9  | 10/22 | Tree Ensembles.                                                                                              | <b>Class Notes</b> <ul style="list-style-type: none"> <li>• Decision trees <a href="#">[pdf]</a></li> <li>• Ensembling methods <a href="#">[pdf]</a></li> </ul>                                                                                                                                    |
| Lecture 10 | 10/24 | Neural Networks: Basics                                                                                      | <b>Class Notes</b> <ul style="list-style-type: none"> <li>• Online Learning and the Perceptron Algorithm.
